ÚVOD

Vyučovanie cudzieho jazyka je pevnou súčasťou školských osnov. Na základných školách s vyučovacím jazykom maďarským (VJM) sa cudzí jazyk povinne vyučuje od 3. ročníka. Žiaci sa cudzí jazyk učia popri svojom materinskom (maďarskom) jazyku a štátnom (slovenskom) jazyku. Všeobecným cieľom je zabezpečiť dosiahnutie komunikačnej úrovne B1/B2 podľa Spoločného európskeho referenčného rámca (SERR) pre jazyky v prvom cudzom jazyku. Kľúčovými kompetenciami v oblasti jazykovej prípravy sú: porozumieť, hovoriť a písať. Učebnice a iné publikácie pre vyučovanie anglického jazyka dostupné na trhu sú výborné, avšak pre potreby krúžkovej činnosti v rámci MRK často náročné, resp. vychádzajú len v slovenskej jazykovej mutácii.

Cieľom vytvorenia tohto učebného zdroja je poskytnúť pracovné listy pre potreby základných škôl s VJM, ktoré sú zamerané na precvičovanie slovnej zásoby jednoduchou, hravou formou. Pracovné listy sú rozdelené do tematických okruhov, slovná zásoba vychádza z požiadaviek SERR na úrovni A1, základná slovná zásoba je zosumarizovaná s maďarským prekladom.

Pracovné listy poslúžia na precvičovanie a upevnenie poznatkov z anglického jazyka, môžu sa používať na vyučovacej hodine ako doplnkový materiál, ako aj pre potreby krúžkovej činnosti. Pracovné listy sú koncipované tak, aby s nimi žiaci mohli pracovať samostatne, len pri niektorých cvičeniach sa vyžaduje pomoc učiteľa.

Butterflies are very interesting insects on the planet Earth. There are more than seventeen thousand different kinds of butterflies! Butterflies come in all shapes and sizes.

Butterflies go through four main stages of life. The first stage is the egg stage. The second stage is the larva stage. As a larva, or caterpillar, the future butterfly eats as much as possible. As it grows, it sheds its outer skin, or exoskeleton. This may happen four or five times. After a few weeks, the caterpillar enters the next stage of its life, the chrysalis stage. In the chrysalis, the caterpillar will liquefy into a soup of living cells. Then, it will reorganize into a butterfly and the metamorphosis is complete. In later parts of the chrysalis stage, you can see the forming butterfly through the chrysalis.

When the butterfly emerges from the chrysalis, it pumps its wings to send blood through them so that it can fly. Most butterflies only live a couple of weeks, just enough time to drink flower nectar and to mate. Some, like the Monarch Butterfly, however, may live many months.

Others are violet, orange, golden, silver or other combinations only Mother Nature could dream up. All hummingbirds have long bills to insert into flowers. Some hummingbirds have special bills to fit in specific flowers. Hummingbirds are the only birds that can fly backwards.

Hummingbirds are also unique among bird species in that they drink nectar from flowers. People can attract hummingbirds to their yard with special feeders that are filled with sugar water. These feeders are usually bright red in color because hummingbirds are attracted to red.
